THE PATENT OFFICE
PATENTS AND DESIGNS

Kolkata, the 14th August 2004

ADDRESSES AND JURISDICTION OF THE OFFICES
OF THE PATENTS OFFICE

The Patent Office has its Head Office at Kolkata and Branch Offices at Mumbai, Delhi and Chennai having Territorial Jurisdiction on a Zonal basis as shown below:—

1. Patent Office Branch,
Todi Estates, IIIrd Floor,
Sun Mill Compound,
Lower Parel (West),
Mumbai-400 013.

The States of Gujarat,
Maharashtra, Madhya Pradesh
and Goa and the Union
Territories of Daman and
Diu & Dadra and Nagar Haveli.

Telegraphic Address "PATOFFICE"
Phone Nos. (022) 2492 4058, 2496 1370, 2492 3684,
2490 3852
Fax Nos. (022) 2495 0622, 2490 3852
E-mail: patnum@vsnl.net

2. Patent Office Branch,
W-5, West Patel Nagar,
New Delhi-110 008.

The States of Haryana,
Himachal Pradesh,
Jammu and Kashmir,
Punjab, Rajasthan,
Uttar Pradesh and Delhi and the
Union Territory of Chandigarh.

Telegraphic Address "PATENTOFIC"
Phone Nos. (011) 2587 1255, 2587 1256,
2587 1257, 2587 1258.
Fax No. (011) 2587 1256.
E-mail: delhipatent@vsnl.net

3. Patent Office Branch,
Guna Complex, 6th Floor, Annex-II,
443, Annasalai, Teynampet,
Chennai-600 018.

The States of Andhra Pradesh,
Karnataka, Kerala, Tamil Nadu and
Pondicherry and the Union
Territories of Laccadive, Minicoy and
Aminidivi Islands.

Telegraphic Address "PATENTOFFIC"
Phone Nos. (044) 2431 4324/4325/4326.
Fax Nos. (044) 2431 4750/4751.
E-mail. patentchennai @ vsnl. net

4. Patent Office (Head Office),
Nizam Palace, 2nd M.S.O. Building,
5th, 6th & 7th Floor,
234/4, Acharya Jagadish Bose Road,
Kolkata-700 020.

Rest of India

Telegraphic Address "PATENTS"
Phone Nos. (033) 2247 4401/4402/4403.

Fax Nos. (033) 2247 3851, 2240 1353.

All applications, notices, statements or other documents or any fees required by the Patents Act, 1970 and the Patents (Amendment) Act, 2002 or by The Patents Rules, 2003 will be received only at the appropriate offices of the Patent Office.

Fees : The fees may either be paid in cash or may be sent by Bank Draft or Cheques payable to the Controller of Patents drawn on a scheduled Bank at the place where the appropriate office is situated.

पेटेंट कार्यालय

एकस्य तथा अभिकल्प

कोलकाता, दिनांक 14 अगस्त 2004

पेटेंट कार्यालय के कार्यालयों के पते एवं क्षेत्राधिकार

पेटेंट कार्यालय का प्रधान कार्यालय कोलकाता में अवस्थित है तथा मुम्बई, दिल्ली एवं चेन्नई में इसके शाखा कार्यालय हैं, जिनके प्रादेशिक क्षेत्राधिकार जोन के आधार पर निम्न रूप में प्रदर्शित हैं:--

1. पेटेंट कार्यालय शाखा,
टोडी इस्टेट, तीसरा तल,
सन मिल कम्पाउंड,
लोअर परेल (वेस्ट),
मुम्बई - 400 013 ।

गुजरात, महाराष्ट्र, मध्य प्रदेश तथा
गोआ राज्य क्षेत्र एवं
संघ शासित क्षेत्र, दमन तथा दीव एवं
दादर और नगर हवेली ।

तार पता : "पेटेफिस"

फोन : (022) 2492 4058, 2496 1370, 2492 3684, 2490 3852

फैक्स : (022) 2495 0622, 2490 3852

ई. मेल : patmum@vsnl.net

2. पेटेंट कार्यालय शाखा,
डब्ल्यू-5, वेस्ट पटेल नगर,
नई दिल्ली - 110 008 ।

हरियाणा, हिमाचल प्रदेश, जम्मू
तथा कश्मीर, पंजाब, राजस्थान,
उत्तर प्रदेश तथा दिल्ली राज्य
क्षेत्रों एवं संघ शासित क्षेत्र चंडीगढ़ ।

तार पता : "पेटेटोफिक"

फोन : (011) 2587 1255, 2587 1256, 2587 1257,

2587 1258.

फैक्स : (011) 2587 1256.

ई. मेल : delhipatent@vsnl.net

3. पेटेंट कार्यालय शाखा,

गुना कम्प्लेक्स, छठ तल, एनेक्स-II,

443, अन्नासलाई, तेनामपेट,

चेन्नई - 600 018 ।

आन्ध्र प्रदेश, कर्नाटक, केरल, तमिलनाडु

तथा पाण्डिचेरी राज्य क्षेत्र एवं संघ

शासित क्षेत्र लक्षद्वीप, मिनीकाय तथा एमिनिदिबि द्वीप ।

तार पता - "पेटेटोफिक"

फोन : (044) 2431 4324/4325/4326.

फैक्स : (044) 2431 4750/4751.

ई. मेल : patentchennai@vsnl.net

4. पेटेंट कार्यालय (प्रधान कार्यालय),
निजाम पैलेस, द्वितीय बहुतलीय कार्यालय
भवन, 5वां, 6ठा व 7वां तल,
234/4, आचार्य जगदीश बोस मार्ग,
कोलकाता - 700 020 ।

भारत का अवशेष क्षेत्र ।

तार पता - "पेटेट्स"

फोन : (033) 2247 4401/4402/4403.

फैक्स : (033) 2247 3851, 2240 1353.

ई. मेल : patentin@vsnl.com

patindia@giascl01.vsnl.net.in

वेब साइट : http://www. Ipindia. nic. in

पेटेंट अधिनियम, 1970 तथा पेटेंट (संशोधन) अधिनियम, 2002 अथवा पेटेंट नियम, 2003 द्वारा अपेक्षित सभी आवेदन, सूचनाएं, विवरण या अन्य दस्तावेज या कोई फीस पेटेंट कार्यालय के केवल समुचित कार्यालय में ही ग्रहण किए जाएंगे ।

शुल्क : शुल्कों की अदायगी या तो नकद की जाएगी अथवा जहां उपयुक्त कार्यालय अवस्थित है, उस स्थान के अनुसूचित बैंक से नियंत्रक, पेटेंट को भुगतान योग्य बैंक ड्राफ्ट अथवा बैंक द्वारा की जा सकती है ।

PUBLIC NOTICE

It is brought to the notice of all concerned that a priced publication of Geographical Indications Journal is available from July 2004. It would be a bi-monthly publication. The cost of each Journal is **Rs.150/- (Rupees One Fifty Only)**. The cost of the Annual Subscription is **Rs.900 (Rupees Nine Hundred Only)**. There will be six issues annually. Interested parties who are desirous of subscribing the Annual Subscription for the above Journal may forward a Demand Draft which should be drawn in favour of "Registrar of Geographical Indications" Payable at Chennai.

The public can also remit cash at the counter of Geographical Indications Registry, 443, Guna Complex Annexe I, 1st Floor, Anna Salai, Teynampet, Chennai – 600 018 on all working days.

For any further information in this regard please contact:-

The Assistant Registrar of Geographical Indications, Geographical Indications Registry, 443, Guna Complex Annexe I, 1st Floor, Anna Salai, Teynampet, Chennai – 600 018.

Tel: 24314293,95 Fax No: 24314297 E-mail: girindia@vsnl.net.

Application for Grant of Exclusive Marketing Rights(EMR)

One application for grant of EMR bearing No. EMR/2/2004 on "A Novel Therapeutic Injectable Analgesic Composition" has been filed on 14th July, 2004 by PANACEA BIOTECH LTD., B-1 Extn./A-27, Mohan Co. operative Industrial Estate, Mathura Road, New Delhi-110 044 against corresponding Application for Patent No. 2047/DEL/95 dated 08-11-1995.

---	---

(57) Abstract : An arc quenching device for a low voltage switching device which switches in air and having a universally usable, variable attachment for matching the arc quenching chamber to more stringent requirements, characterized in that the attachment is in the form of a chimney-like arc quenching chamber extension in order to increase the volume of the arc quenching chamber, and represent a molding which has a lower contour which is precisely the same as the contour of the arc quenching chamber cover which is normally located on the arc quenching chamber, and whose upper contour is identical to the upper contour of the switch enclosure in order to accommodate the arc quenching chamber cover.

(57) Abstract :

(I)

Disclosed are compounds of the Formula (I), and pharmaceutically acceptable salts and prodrugs thereof, wherein A, B, R¹, R², R³, R⁴ and R⁵ are as defined in the specification. Such compounds are tyrosine phosphatase inhibitors and useful in the treatment or prevention of Type II Diabetes Mellitus. Also encompassed by the invention are formulations comprising the noted compounds, processes for preparing such compounds, a method for treating or preventing Type II Diabetes Mellitus.

---	---

(57) Abstract : Process for waterproofing a semi manufactured product (1) of shoes, clothing items and accessories, said semi manufactured product (1) having a three dimensional conformation, at least one inner surface (2) and one outer surface, characterized in that it comprises the following operative steps:

- turning inside out the semi manufactured product (1) so that its inner surface (2) is turned outwards;
 - inserting at least one shaped member (4, 8) inside the semi manufactured product (1);
 - pressing the semi manufactured product (1) provided with the shaped member (4; 8) between at least a pair of sheets (5) of a semi-permeable membrane whose surface turned toward the semi manufactured product (1) turned inside out is provided with a glue pattern;
 - turning the semi manufactured product (1) so that its inner surface is turned inwards.
- The present invention also relates to a device for carrying out said process and the semi manufactured products obtained with said process.

PLACE, MOLINE, IL 61265-8098, U.S.A.

(72) Name of the Inventors :
KEEN, ERIC, ALBERT

(57) Abstract :

A vehicle hood assembly includes a hood support (18) having a top section (20) joined to left and right side sections (22, 24) and to a front section (26). An outer panel assembly (30) includes a finished top panel (32) mounted on the top section (20), a finished front panel assembly (34) mounted on the front section (26), a finished left side panel (42) mounted on the left section (22), and a finished right side panel (44) mounted on the right section (24). Each panel (32, 42, 44) and its respective section (20, 22, 24) form and enclose an air space therebetween. Thus, the inner support (18) and the air space is interposed between the finished panels (32, 42, 44) and the heat from the engine (12). As the hood is raised, the lower portions of the side panels (42, 44) engage a wear strip (62) and are deflected laterally outwardly and away from each other. As the hood is lowered, the lower portions of the side panels (42, 44) move past the wear strip (62), and they move laterally inwardly and towards each other.

(72) Name of the Inventors :
KEEN, ERIC, ALBERT

(57) Abstract :

A support mechanism supports a hood (10) in a raised position with respect to a vehicle to which the hood (10) is pivotally coupled. The support mechanism (14) includes a pivotal lift rod (40) coupled between the vehicle and the hood (10). The mechanism (14) also includes a pair of arm members (16, 30) which are pivotally coupled to each other by a central pivot pin (24), and which are coupled between the vehicle and a central portion (54) of the rod (40). A flat coil spring (60) is coiled around the central pivot pin (24) and is attached to the arm members (16, 30). The spring (60) is biased to pivot the hood (10) upwardly. The lower end (42) of the rod (40) is anchored by a removable pivot pin (44), which, when removed, permits the hood (10) to be raised approximately 90 degrees from its lowered position.

---	--

(57) Abstract : Disclosed herein is an article (such as an insect control pouch 810)) to dispense a volatile active (such as an insect control agent). The pouch (10) is formed from a single layer polymeric non-absorbing film. The pouch traps the active until use of the pouch is desired. When the pouch is opened the walls of the pouch (10) serve as a substrate from which the active can readily passively evaporate. Methods of forming such pouches (10) using heat sealing techniques, and methods of using such pouches (10), are also disclosed.

(57) Abstract :

In a beverage dispensing nozzle (10), a cap member (11) includes first, second and third beverage syrup inlet ports (21-23) coupled to a respective first, second, and third beverage syrup sources and a mixing fluid inlet port (27) coupled to a mixing fluid source. A first annulus (17) coupled with the cap member includes discharge channels (55), wherein the first beverage syrup inlet port communicates beverage syrup to the discharge channels for discharge from the beverage dispensing nozzle. A second annulus (18) disposed within the first annulus and coupled with the cap member includes discharge channels (59), wherein the second beverage syrup inlet port communicates beverage syrup to the discharge channels for discharge from the beverage dispensing nozzle. A third annulus (19) disposed within the second annulus and coupled with the cap member includes discharge channels (63), wherein the third beverage syrup inlet port communicates beverage syrup to the discharge channels for discharge from the beverage dispensing nozzle.

---	--

(57) Abstract :

A rotary regenerative air preheater (10) has ring assemblies (34) at the upper and lower ends which define the outer periphery and support the air preheater housing panels (50). The ring assemblies (34) are spaced by spokes (46) which are tied to the hub (48) of the air preheater (10) and vertically supported from the air preheater structural members. The rotor housing panels (50) are attached around and between the spoked ring assemblies (34). The ring assemblies (34) are formed from a series of uniform interchangeable segments (36) and they support the peripheral bypass seals (52).

(57) Abstract :

A method for constructing a rotor (14) of an air pre-heater (10) having a plurality of diaphragm plates (32) dividing the rotor (14) into a number of wedge-shaped compartments (30). Each compartment (30) includes compartment components such as a rotor shell plate (38), a hot end rotor angle (40), a cold end rotor angle (42), and one or more stay plates (44) and means for locating at least a portion of each of the components within the compartment. The diaphragm plates (32) comprise at least one opening serving as an index location associated with each compartment component on each diaphragm plate blank. Each compartment (30) is assembled by positioning a first diaphragm plate (32) adjacent to a second diaphragm plate (32) and locating each compartment component between the adjacent diaphragm plates (32) by engaging the locating means of the component in an associated opening in one of the diaphragm plates (32).

(57) Abstract : Each memory cell is a memory transistor which is provided on a top side of a semiconductor body with a gate electrode (2) which is arranged in a trench between a source region (3) and a drain region (4), which are formed in the semiconductor material. The gate electrode is separated from the semiconductor material by dielectric material. At least between the source region and the gate electrode and between the drain region and the gate electrode there is an oxide-nitride-oxide layer sequence (5, 6, 7), which is provided for the purpose of trapping charge carriers at source and drain.

164 AVENUE DE LA CLUA, F-06100 NICE,
A FRENCH NATIONAL.

(72) Name of the Inventors :
MANGEARD, PHILIPPE.

(57) Abstract :

The invention concerns a slatted roofing device, comprising a frame (1) receiving a lower series (2) of grid-type mounted slats and at least a support (3) superimposed on the frame (1) receiving an upper series (4) of grid-type mounted slats, the support (3) being transversely mobile with respect to the longitudinal direction of the slats on the frame (1) to modify the lateral position of the slats of the upper series (4) relative to those of the lower series (2), the slats shifting from a completely overlapping position when the roof is open to a partial overlapping position when the roof is closed. Said device comprises means for lifting the support (3) relative to the frame (1) to allow air to pass through the roof even when the series of upper (4) and lower slats cover the whole roof surface.

---	--

(57) Abstract : An array and row and column line architecture for a display is disclosed. The array consists of a plurality of row and column positions and a plurality of three-color pixel elements. A three-color pixel element can comprise a blue emitter, a pair of red emitters, and a pair of green emitters. Several designs for the three-colour pixel element are contemplated. The drive matrix consists of a plurality of row and column drivers to drive the individual emitters. The row drivers drive the red, green and blue emitters in each row. The red and green emitters in each column are driven by a single column driver. However, a single column driver can drive two column lines of blue emitters, a first column line and a second column line of the next nearest neighboring three-color pixel element. Methods of driving a three-color pixel element are also disclosed.

(57) Abstract : The present invention relates to a new method for repairing human or animal tissues such as cartilage, meniscus, ligament, tendon, bone, skin, cornea, periodontal tissues, abscesses, resected tumours, and ulcers. The method comprises the step of introducing into the tissue a temperature dependent polymer gel composition such that the composition adhere to the tissue and promote support for cell proliferation for repairing the tissue. Other than a polymer, the composition preferably comprises a blood component such as whole blood, processed blood, venous blood, arterial blood, blood from bone, blood from bone-marrow, bone marrow, umbilical cord blood, placenta blood, erythrocytes, leukocytes, monocytes, platelets, fibrinogen, thrombin and platelet rich plasma. The present invention also relates to a new composition to be used with the method of the present invention.

--	--

(57) Abstract :

A quantitative measurement system includes an external unit (101a) and an internal unit (102a) are provided for obtaining quantitative analyte measurements, such as within the body. In one example of an application of the system, the internal unit (102a) would be implanted either subcutaneously or otherwise within the body of a subject. The internal unit (102a) contains optoelectronics circuitry (102b), a component of which may be comprised of a fluorescence sensing device. The optoelectronics circuitry (102b) obtains quantitative measurement information and modifies a load (102c) as a function of the obtained information. The load (102c) in turn varies the amount of current through coil (102d), which is coupled to a coil (101f) of the external unit (101a). A demodulator (101b) detects the current variations induced in the external coil (101f) by the internal coil (102d) coupled thereto, and applies the detected signal to processing circuitry, such as a pulse counter (101c) and computer interface (101d), for processing the signal into computer-readable format for inputting to a computer (101e).

(57) Abstract : A vehicle body (2) is provided with front wheels (3) installed to be turnable around vertical axes (27), front wheel turning means (30) for turning the front wheels, rear wheels (4) installed to be turnable around vertical axes (49), and rear wheels turning means (50) for turning the rear wheels. The vertical axes (27, 49) of the front and rear wheels (3, 4) are positioned outwardly of tread centers (3a, 4a) for longitudinal travel, so that on switching to transverse travel, the front wheels (3) can be turned laterally and forwardly and the rear wheels (4) can be turned laterally and rearwardly with respect to the vehicle body (2). This enables the center distances between the right and left wheels and between the front and rear wheels to be greater than those for longitudinal travel, thus improving stability for transverse travel.

--	--

(57) Abstract :

A vehicle body (2) is provided with a pair of right and left front wheels (3) and a pair of right and left rear wheels(4), these wheels being adapted to be turned through 90 degrees. The front wheels (3) are attached to turning members (24) installed on the vehicle body (2) for turning around vertical axes (23), and turning means (40) are installed for turning the turning members (24). The front wheels (3) are operatively connected to travel drive means (30) respectively attached to the turning members (24). The travel drive means (30) extend rearward from the inner sides of the front wheels (3). Masts (6) are installed on the front end of the vehicle body (2), and forks (13) are installed on the masts (6). The front wheels are of the type in which they can be steered to turn sideways. And the travel drive means do not require the masts to be positioned more forwardly of the front wheels than necessary and the longitudinal balance can be satisfactorily maintained without increasing the self-weight.

<p>(51) International classification : G06F 17/60</p> <p>(30) Priority Data :</p> <p>(31) Document No. 60/626,577</p> <p>(32) Date : 27/07/2000</p> <p>(33) Name of convention country : U.S.A.</p> <p>(66) Filed U/s 5(2) :NIL</p> <p>(61) Patent of addition to application No. NA</p> <p>(62) Filed on :NA</p> <p>(63) Divisional to Application No. :NIL</p> <p>(64) Filed on :NA</p>	<p>(71) Name of the Applicant : RPOST INTERNATIONAL, INC., OF 6033 WEST CENTURY BOULEVARD, SUITE 1270 LOS ANGELES, CALIFORNIA 90045 U.S.A.</p> <p>(72) Name of the Inventors : TOMKOW TERRANCE A.</p>
---	---

In order to provide third party verification of the content and delivery of an electronic message such as an e-mail, a server receives the e-mail intended to be sent or forwarded to a specified addressee, and "tags" the message to indicate that it is "registered" with the provider of the service. The server then establishes a direct telnet connection with the addressee's Mail User Agent (MUA), and transmits the tagged e-mail to the addressee's MUA, as well as to the MUA's of any other addressees. After receiving responses from the receiving MUA's that the message was successfully received, the server then creates and forwards to the message originator an electronic receipt. The receipt include one or more, and preferably all of, the following: the original message including any original attachments; a delivery success/failure table listing which addressee's MUA's successfully received message and at what time, and for which MUA's there was a delivery failure; and a digital signature corresponding to the message and attachments. By receiving the receipt at a later date and verifying that the digital signature matches the message and related information, the operators of the system can provide independent third party verification that the receipt is a genuine product of their system and that the information pertaining to content and delivery of the message is accurate, without the need to archive either the original message or the receipt.

--	--

(57) Abstract :

A liquid-pourer of moulded plastics has a spout-portion (1, 17) with a spigot (7, 18) for insertion into a neck (11, 20) of a bottle (10, 19) for pouring liquid from it. Two complementary segmental passageways (4, 5) extend lengthwise through the cylindrical spout-portion (1, 17) for discharge of liquid and admission of air to the bottle (10, 19) respectively. An elongate handle-portion (2, 24) extends both upwardly and rearwardly from the spout-portion (1, 17) to overlie the bottle (10, 19) to allow balance in holding it with the air passageway (5) above the pouring passageway (4). A ring (6) on the handle-portion (2) retains the cap of the bottle (10), and the spout-portion (1, 17) is attached to the bottle-neck (11, 20) by a screw-threaded collar (8), or a spring clip (15 Fig 5).

(72) Name of the Inventors : BRYDGES-PRICE, RICHARD, IAN.

(57) Abstract :

A non-lethal projectile or a projectile for delivery of a substance (optional) has a tubular body casing (1) which surrounds a compartment (2) for containment of the substance. The compartment (2) coaxially supports a hollow tube (5) projecting forward within an ogival nose cap (8). An inflatable membrane (7) is located within the nose cap (8). On target impact the nose is displaced and permits a small amount of substance from compartment (2) to bleed through opening (6) allowing piston (4) to move forward uncovering ports (16). This action allows pressure gas to pass through the ports (16) and ducts to inflate the membrane (7). The piston is also free to move forward to discharge the substance through needle (5). The bag (7) thus expands rapidly and prevents excess penetration whilst spreading the impact energy over a wide area. The construction avoids the need for a charge to be contained within the projectile itself.

(57) Abstract :

A rotating magnetic refrigeration apparatus has magnetic regenerator beds (22) arranged in a ring (21) that is mounted for rotation about a central axis, such that each bed moves into and out of a magnetic field provided by a magnet (29) as the ring (21) rotates. Heat transfer fluid is directed to and from the regenerator beds (22) by a distribution valve (24) which is connected by conduits to the hot and cold ends of the beds and which rotates with the ring (21) of beds (22). The distribution valve (24) has a stationary valve member which is connected by conduits to a hot heat exchanger (34) and to a cold heat exchanger (38). The beds include magnetocaloric material that is porous and that allows heat transfer fluid to flow therethrough. The distribution valve (24) directs heat transfer fluid to the hot end of a bed that is outside of the magnetic field which flows therethrough to the cold end where it is directed back to the distribution valve (24) and, when a bed is in the magnetic field, the distribution valve (24) directs fluid to the cold end of the bed for flow therethrough to the hot end, where the fluid is directed back to the distribution valve, completing an active magnetic regenerator cycle. The fluid flowing through each conduit flows only in a single direction or remains stationary, minimizing dead volume in the conduits.

(57) Abstract :

The invention relates to an encoding method, which uses statistical characteristics of all types of network protocols without requiring specific knowledge of the definitions of individual protocol fields. Network protocols in general contain long contiguous sections, which remain unchanged. Said sections are therefore predicted from the preceding header and do not need to be transmitted. The position of the modified and unmodified fields is also predicted, so that in most cases, transmission of the position co-ordinates is not necessary. Said principle, together with a corresponding differential encoding, achieves a high data compression, as only the modified data and a small amount of overhead need to be transmitted.

(57) Abstract : Method and devices are provided for detecting the application of a fluid sample onto a test strip surface when the test strip is inserted into an optical meter. In the subject methods, reflectance data is obtained from a portion of the optical meter in a which the same application region of the test strip is located, where the reflectance data covers a period of time ranging from a point at least prior to application of the sample to the strip to a point following application of the sample to the strip. The presence of the fluid sample on the test strip is then determined from the reflectance data. Also provided are optical meters that include optical means for obtaining reflectance data, where these optical means include at least an irradiation source and a light detector. The subject methods and devices find use with a variety of test strips, and are particularly suited for use with test strips that include a fluid movement means, such as a compressible bladder.

(57) Abstract :

Codeword-position-caused encoder latency is reduced by avoiding the requirement for knowledge of the message prior to generating an error detecting or concealing codeword associated with the message. A pseudo error detecting or concealing codeword is inserted in place of the normal error detecting or concealing codeword appropriate for the segment of information to which the error detecting or concealing codeword relates. In order to satisfy the requirement of conventional decoders, the pseudo error detecting or concealing information must match or be appropriate for the segment so that the decoder sees the codeword and message segment as valid or error free. This is accomplished by modifying or perturbing at least a portion of the segment to which the pseudo codeword relates. The invention is particularly useful for maintaining the backward compatibility of audio data encoding formats in which the minimum latency is too long (e.g. computer games, where the player performs some operation leading to a sound, and that sound must not be perceptibly delayed with respect to the operation).

---	--

(57) Abstract :

A device is disclosed which finds application in the simultaneous restraining but allowing rotational movement of an apparatus for the collection and concentration of radiation flux, particularly solar flux. The device (1) comprises a transparent spherical shell (2). A rigid circular rod (3) holds and frames a mirror (4) which is reflective on its upper surface (5). The rod (3) and mirror (4) assembly is attached to the inner surface of the shell (2) by a series of peripheral elastic ligaments (6). A second membrane (7) is affixed to the under surface of the mirror (4) and tethered to the inner surface of the shell (2) by a second ligament (8) in a manner to maintain a pressure differential across the two approximate hemi-spheres separated by the mirror (4). A quantity of water (13) is contained within the shell (2) acting as ballast. The lower portion of the shell (2) rests on a toroid (9) which, in turn is affixed to a membrane-type base (10). The toroid (9) is filled with water (11). The vessel created by the inside surface of the toroid (9) and the upper surface of the base (10) also contains a quantity of water (12). The quantity of the water (12,13) is sufficient for the shell (2) to be buoyantly supported within the vessel while being restrained within the boundaries of the toroid (9) and base (10) but free for rotational movement as required to track the sun, When serving as a solar energy collector, thermal power outputs of 2.2MW and beyond should be possible.

--	---

(57) Abstract :

A method and system are disclosed for cooling a heat generating object. A coolant is passed through a heat exchanger so that heated air passing through a first portion of the heat exchange is cooled. A fan unit is selectively positioned relative to the heat exchanger. When activated, the fan unit draws the cooled air through a second portion of the heat exchanger and directs the twice cooled air towards the heat generating object. The fan unit may be repositioned along a different portion of the heat exchanger so as to redefine the flow of air drawn from and directed towards the heat generating object.

--	---

(57) Abstract : A method and system for rating a data communication session between a network and a wireless device is disclosed. In an exemplary embodiment, the method monitors a series of events, namely, a setup event, a begin event and an end event, which take place during a communication session. The monitoring of such events is accomplished by a data rating application which resides on the wireless device. By monitoring such events, the data rating application is then able to rate the communication session using a number of rating options. The rating option selected includes both how to meter the data transmitted during a data communication session and determine the rate to be applied to each metered increment. Examples of methods used to meter the data include time and volume. Different rating options which can be used to rate the communication session include, for example, application, data utilization, source of data, class of service, quality of service, quality of service and transmission efficiency.

---	--

(57) Abstract :

A system having a wireless device (14) capable of monitoring and tracking its own usage and account activities is disclosed. The wireless device (14) includes an account management application (30) and accounting applications (32). The account management application (30) manages a variety of accounts in conjunction with the accounting applications (32) and is used by a user to determine how each call/transaction is to be paid for. For example, the user of the wireless device (14) may wish to pay for business calls using a first account and personal calls using a second account.

(54) Title of the Invention : "A SELF-DESTRUCTING SYRINGE"

(51) International classification : A61M 5/50 (30) Priority Data : (31) Document No. 00243818.6, 00259762.4, 00267535.8 & 00267534.X (32) Date : 25/07/2000, 06/11/2000, 25/12/2000 & 25/12/2000 (33) Name of convention country :CN (66) Filed U/s 5(2) :NIL (61) Patent of addition to application No. NA (62) Filed on :NA (63) Divisional to Application No. :NIL (64) Filed on :NA	(71) Name of the Applicant : HSIEH, HSIEN-MING OF 28, CHENG-GONG ST., E-MEI TOWN, XIN-ZHU COUNY, TAIWAN PROVINCE, R.O.C. (72) Name of the Inventors : HSIEH, HSIEN-MING.
--	---

(57) Abstract : A self-destructing syringe includes an elliptic needle cylinder, a plunger, a needle holder and a needle. A handle is provided on one end of the plunger, and a piston is provided on the other end of the plunger. The handle is engaged with the piston by a plunger body. There is a hoe on the bottom center of the needle cylinder, which is used to mount the needle holder. The holder is mounted on the needle cylinder by the piston located on the bottom of the needle cylinder. The plunger body has a breakable region. The needle cylinder and the needle cap are incorporate, on which a disposable destructing device is provided.

- (21) Application No. 100/KOL-NP/2003 A (22) Date of filing of : 28/01/2003 application
 (54) Title of the Invention : "METHOD FOR PRODUCING AN ADHESIVE CLOSING ELEMENT"

(51) International classification : A44B 18/00 (30) Priority Data : (31) Document No. 100 39 937.1 (32) Date : 16/08/2000 (33) Name of convention country :DE (66) Filed U/s 5(2) :NIL (61) Patent of addition to application No. NA (62) Filed on :NA (63) Divisional to Application No. :NIL (64) Filed on :NA	(71) Name of the Applicant : GOTTLIEB BINDER GMBH & CO., GERMANY, BAHNHOFSTR. 19, 71088 HOLZGERLINGEN, A GERMAN COMPANY. (72) Name of the Inventors : TUMA, JAN.
---	--

(57) Abstract :

The invention relates to a method for producing an adhesive closing element comprising a plurality of hook elements connected to a support (10) forming a single piece therewith and being disposed symetrically thereon. Said elements are provided in the form of a stem component (17) having a head piece (16), wherein a deformable material is introduced into a forming zone inbetween a production master (3) and a forming tool (5). The opposite-lying defining walls, at least when seen in a longitudinal section of the respective forming cavity (12) are provided with a continuous convex trajectory, whereby a continuous transition between the cross-sectional forms of the stem component (17) and the head piece (16) is provided for a hooking means of the support (10) resulting in seamless removal.

(54) Title of the Invention : "METHOD AND APPARAUS FOR PATCH-CLAMP MEASUREMENTS ON CELLS"

<p>(51) International classification : G01N 33/487, C12M 1/34</p> <p>(30) Priority Data :</p> <p>(31) Document No. 00116515.8</p> <p>(32) Date : 31/07/2000</p> <p>(33) Name of convention country :EP</p> <p>(66) Filed U/s 5(2) :NIL</p> <p>(61) Patent of addition to application No. NA</p> <p>(62) Filed on :NA</p> <p>(63) Divisional to Application No. :NIL</p> <p>(64) Filed on :NA</p>	<p>(71) Name of the Applicant : FLYION GMBH, OF GMELINSTRASSE 5, 72076 TUTINGEN, GERMANY.</p> <p>(72) Name of the Inventors : LEPPLE-WIENHUES, ALBRECHT.</p>
--	--

(57) Abstract : The invention shows a method for patch-clamp experiments on cells or similar structures, where at least one cell is inserted into the lumen of a capillary and is positioned inside the capillary so, that a sufficiently tight seal with a resistance exceeding 1, preferably 10 GigaOhm develops between cell membrane and inner surface of the capillary. Along its length said capillary has at least at one position a smaller inner diameter than the outer diameter of said cell. Preferably the cell is inserted and positioned in the capillary by pressure, suction, sedimentation or centrifugation of a suspension or solution containing said cell. An apparatus for performing experiments using this method is described.

---	--

(57) Abstract :

Signals from distributed radio sections (102—1 . 102—N) are sent to a demodulator (1031) of BTS (103) In the demodulator (1031), maximum ratio combining is performed with respect to each signal after radio reception processing. That is to say, since, in conventional DHO, demodulation processing is performed individually in each BTS and demodulated data after the demodulation processing is sent to RNC, where selection diversity is performed with the demodulated data, maximum ratio combining cannot be performed during the demodulation processing in BTS. However, the present invention is configured such that a single BTS processes signals received in distributed antennas, so that the demodulator (1031) can perform maximum ratio combining with respect to every signal after radio reception processing, thereby improving the reliability of the demodulated data.

---	--

(57) Abstract :

The subject of the invention is an electronic arrangement for navigational aid for vessels such as military or merchant vessels, which are subject to stresses of a meteorological and/or operational type and which include the following means:

- means for collecting meteorological type data, load data and operational stress data,
- means for modelling the meteorological and 20 operational context,
- means for modelling the vessel's deck,
- means for modelling the swell/vessel interactions following criteria such as rolling, pitching, structural deformity, heaving, beating and the relative wind strength,
- means for establishing safe navigation zones for the vessel in terms of course/speed for each of the criteria used during the swell/vessel interaction modellings,
- means for establishing the operable zones for the vessel by combining the safe zones of at least two criteria.

Also the subject/object of the invention is a method using such a device.

---	--

(57) Abstract :

To realize direct and intermittent rotation of a transfer member by directly coupling the rotary part of a servo motor with a rotary shaft. A supporting board is arranged side by side with working space 3 made vacant above a machine base. The center part of a transfer member arranged on the under surface of a supporting board 4 is coupled with a rotary shaft 7 of a reactively large diameter inserted through the center of the supporting board and mounted on a bearing. The servo motor 8 provided with the fixing part 8b inside of the rotary part 8a of the large diameter in the center of the supporting board 4 is attached to a supporting base 15 erected on the supporting board 4 via a joint 18 on the side of the fixing part 8b. The rotary part 8a is mounted on the top of the rotary shaft 7, and thereby the transfer member 6 is constructed so as to be directly rotated with the rotary shaft 7 by the servo motor 8.

--	---

(57) Abstract : The method involves preparing a the prep reg and pressing, hardening and carburizing said prep reg, which then undergoes heat treatment at a temperature ranging between 70 and 1,100°C. The prep reg is filled with an inert substance comprising a charge and a polymeric ligand in a quantity surpassing the volume of holes of the monolayer tissue., which is calculated by means of formula (I), wherein m_n represents the inert substance material d_n represents the inert substance density, a is the length of the prep reg, b is the width of the prep reg, h is the thickness of the prep reg, m_{cr} is the prep reg mass and d_{rb} is the fiber density. The prep reg is then heated at a temperature ranging between 160°C and 200°C while applying simultaneously a pressure ranging between 1 and 5 MPa. The method can be used to manufacture composites with a matrix containing carbon and variable porosity, for instance fuel cell current collectors with electrode aggregates, porous electrochemical electrodes or filtering elements.

(57) Abstract : Methods, nucleic acid sequences, and transformed duckweed plant or duckweed nodule cultures for the expression and the secretion of biologically active polypeptides from genetically engineered duckweed are provided. Expression of recombinant polypeptides in duckweed is improved by modifying the nucleotide sequence of the expression cassette encoding the polypeptide for improved expression in duckweed. Recovery of biologically active polypeptides from duckweed is improved by linking the biologically active polypeptide to a signal peptide that directs the secretion of the polypeptide into the culture medium.

(57) Abstract :

An apparatus comprises a radio frequency magnetic field unit to generate a desired magnetic field. In one embodiment, the radio frequency magnetic field unit includes a first aperture that is substantially unobstructed and a second aperture contiguous to the first aperture. In an alternative embodiment, the radio frequency magnetic field unit includes a first side aperture, a second side aperture and one or more end apertures. In one embodiment of a method, a current element is removed from a radio frequency magnetic field unit to form a magnetic field unit having an aperture. In an alternative embodiment, two current elements located opposite from one another in a radio frequency magnetic field unit are removed to form a magnetic field unit having a first side aperture and a second side aperture.

2. YU, JOHN, J.

(57) Abstract :

The invention combines cryptographic key management technology with various authentication options and the use of a companion PKI system in a web-centric cryptographic key management security method and apparatus called (<i>PXa<3TM></i> Precise eXtensible Authentication, Authorization and Administration). The (<i>PXa<3></i>) model uses a security profile unique to a network user and the member domain(s) he/she belongs to. A PXa<3> server holds all private keys and certificates, the user's security profile, including credentials and the optional authentication enrollment data. The server maintains a security profile for each user, and administrators simply transmitted credential updates and other periodic maintenance updates to users via their PXa<3> server-based member accounts. Domain and workgroup administrators also perform administrative chores via a connection to the (<i>PXa<3></i>) web site, rather than on a local workstation. A member's security profile, containing algorithm access permissions, credentials, domain and maintenance values, a file header encrypting key, optional biometric templates, and domain-specific policies is contained in one of two places: either on a removable cryptographic token (e.g., a smart card), or on a central server-based profile maintained for each member and available as a downloadable "soft token" over any Internet connection.

(57) Abstract :

Compounds represented by the following structural formula (I), and pharmaceutically acceptable salts, solvates and hydrates thereof, wherein: n is 2, 3, or 4 and W is CH₂, CH(OH), C(O) or O; R₁ is an unsubstituted or substituted aryl, heteroaryl, cycloalkyl, heterocycloalkyl, aryl-alkyl, heteroaryl-alkyl, cycloalkyl-alkyl, or t-butyl; R₂ is H, alkyl, haloalkyl or phenyl; Y is an unsubstituted or substituted thiophen-2,5-diyl or phenylene; R₃ is alkyl or haloalkyl; R₄ is a substituted or unsubstituted phenyl, naphthyl, 1,2,3,4-tetrahydronaphthyl, quinolyl, pyridyl or benzo[1,3]dioxol-5-yl group; and R₅ is H, alkyl, or aminoalkyl, are useful for modulating a peroxisome proliferator activated receptor, particularly in the treatment of diabetes mellitus.

(57) Abstract :

The process is performed in the gas phase in the presence of molecular oxygen at temperatures in the range from 200 to 500°C in at least one reactor, which constitutes a cooling-tube reactor and contains a catalyst. Cooling liquid flows through the cooling tubes of the reactor, and from the reactor a gaseous product mixture is withdrawn. 40 to 100 wt-% of the total amount of catalyst of the cooling-tube reactor are disposed as coating on the outside of the cooling tubes, wherein the feed mixture containing the feedstock and the molecular oxygen gets in contact with the catalyst layers. Preferably, at least half the cooling tubes constitute ribbed tubes with ribs protruding on the outside, the ribs being at least partly coated with catalyst.

(57) Abstract :

A monochrome ink jet printhead having a high-density array of ink drop generators (165) capable of multi-mode operation. The printhead of the present invention includes the array of ink drop generators (165) arranged in at least three groups of nozzles (540, 550, 560) with each group staggered relative to each other. This staggered arrangement provides high print resolution at high speed. In addition, the multiple modes of operation provided by the present invention permits different print modes depending on the desired print speed, resolution and quality. In a preferred embodiment, the present invention is capable of printing in a one-pass 1200 dpi mode at high speed, a two-pass 600 dpi mode high print quality and a one-pass 600 dpi mode at high speed. The present invention also includes a method of high-performance printing using the ink jet printhead of the present invention.

(57) Abstract :

A compact monochrome ink jet printhead (150) having a staggered high- density arrangement of ink drop generators (165) for high-performance printing. The present invention provides a high-performance design that enable high-resolution and high-speed printing while reducing cost due to an efficient use of printhead space. In particular, the compact high-performance printhead (150) of the present invention

includes several thermally-efficient aspects that allow a large number of ink drop generators (165) to be placed on a compact printhead (160) while minimizing problems such as thermal excursions. In a preferred embodiment, the ink drop generator density on the compact printhead (160) exceeds 10 ink drop generators per square millimeter and the compact printhead (160) contains at least 350 nozzles. The

ink drop generators (165) are arranged in at least four parallel rows. Each row is staggered (or offset) relative to an adjacent row to provide a greater effective pitch than a non-staggered arrangement. The ink drop generators (165) of the present invention include high resistance resistors (530) and a thin passivation (1034, 1036) to increase thermal efficiency. Further thermal control is achieved by ejecting low-

weight ink drops from the thermally-efficient ink drop generators (165) at a high ejection frequency that exceeds 12 kHz.

A compact monochrome ink jet printhead (150) having a staggered high-density arrangement of ink drop generators (165) for high-performance printing. The present invention provides a high-performance design that enable high-resolution and high-speed printing while reducing cost due to an efficient use of printhead space. In particular, the compact, high-performance printhead (150) of the present invention includes several thermally-efficient aspects that allow a large number of ink drop generators (165) to be placed on a compact printhead (160) while minimizing problems such as thermal excursions. In a preferred embodiment, the ink drop generator density on the compact printhead (160) exceeds 10 ink drop generators per square millimeter and the compact printhead (160) contains at least 350 nozzles. The ink drop generators (165) are arranged in at least four parallel rows. Each row is staggered (or offset) relative to an adjacent row to provide a greater effective pitch than a non-staggered arrangement. The ink drop generators (165) of the present invention include high resistance resistors (580) and a thin passivation (1034, 1036) to increase thermal efficiency. Further thermal control is achieved by ejecting low-weight ink drops from the thermally-efficient ink drop generators (165) at a high ejection frequency that exceeds 12 kHz.

(57) Abstract :

Abrasive compositions comprised of water-insoluble abrasive polishing agents suspended in a liquid medium in combination with humectant, and methods for making same. The inventive abrasive compositions are rheologically stable, settling-resistant, and re-agglomeration resistant, even during and after transport and/or storage before end-use, such as incorporation into dentifrice formulations or other oral cleaning compositions. The high settling-resistance of the inventive abrasive composition makes it possible to avoid the need before end use for temporary stabilizers such as inorganic suspending agents (e.g., clays, fumed silicas) or organic binders (e.g., polysaccharides). Also, the abrasive compositions contain abrasive particles having improved brightness as compared to abrasive particles made via drying and dry comminution processing.

A method for generating an interactive profile of a structure, such as a building, employing an interactive profile system that preferably utilizes an Internet web browser to interface with a user. The interactive profile system includes an application engine embodied in a computer program that is preferably based within a server. A plan set, usually in a CAD format, is received into the interactive profile system, typically submitted by the user of client. The building can be any structure, such as a home, office or warehouse, and can also include the property that the structure occupies. The plan set is converted to a profile data set by the profiling engine. In compliance with an enhanced data protocol, which is a specific format for organizing the profile data set in a standardized array. The profiling engine parses, or extracts, the profile data set to develop and link a plurality of potentially interrelated building. The profiling engine performs a systematic enhancement of the plan set, building upon the elemental physical descriptions of the plan set. Each element of the physical description is functionally analyzed for relational attributes and then expanded and tagged. The user directs a profile query to the application engine of the interactive profile system. The profile query is relatable to the enhanced profile and more specifically relatable to at least one of the plurality of interrelated elements of the building. Typical profile requests can include proposed or actual changes to the building, requests for material listings, and project assessments.

(57) Abstract :

Marking sleeve for marking wires or pipes, in particular electric wires, in the form of an annular or sleeve-shaped body manufactured in one piece and made of an elastic material, preferably plastic. The marking sleeve is intended to bear one or more marking symbols and comprises a yoke-shaped outer part with two outer legs (1, 2) which serve as side walls. At their lower ends, these legs merge with an inner yoke-shaped part, which extends up between the legs, with two inner legs (4, 5) and a web portion (6) joining the upper ends of these. This web portion, together with the surrounding yoke-shaped outer part, delimits a tunnel-shaped passage for a wire which is to be marked. The outer surface of each of the outer legs (1, 2) is made with at least one longitudinal groove (9, 10, 11), and the mutually facing surfaces of each of the inner legs (4, 5) are made with at least one longitudinal groove (15). These grooves form deformation indications which facilitate deformation of the marking sleeve, when a wire is guided through the tunnel-shaped passage.

(57) Abstract :

A method and system is provided for constructing large continuous concrete slabs without using conventional shrinkage control joints. The system comprises a grid of closely spaced crack inducers (2) arranged relative to a concrete-pouring surface and adapted to be covered by concrete. The inducers (2) are connected to one another with connectors (10). The inducers (2) are of a size, shape and spacing to promote fine cracking in the vicinity of the inducers (2) throughout the slab when the concrete sets.

(57) Abstract : The present invention provides methods using erythropoietin to improve the tolerance of anti viral and anti-tumor chemotherapeutic regimens containing interferon. The invention also described improved method to treat chronic HCV by adjusting the dose of ribavirin to tailor the active does of the drug while supporting the hemoglobin levels in the patient with EPO. The present invention also provides anti-viral dosing regimes, particularly for chronic HCV comprising administration of an interferon containing anti-viral medicament, EPO, and a compound that reduces the amount of active tumor necrosis factor in the subject.

"A PROCESS FOR THE PURIFICATION OF A RECYCLE INERT GAS STREAM"

Applicant: SINCO ENGINEERING S.p.A., (AN ITALIAN
JOINT STOCK COMPANY) OF LOCALITA RIBROCCA
SN, I - 15057, TORTONA (ALESSANDRIA), ITALY

Inventors: 1. MUSSAIN ALI KASHIF AL GHATTA
2. DARIO GIORDANO

Application No79/MAS/1996 filed on 17th January 1996

Convention No.M195A000085 on, 20th January 1995 in ITALY

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003)
Patent Office, Chennai Branch.

08 Claims

A process for the purification, from impurities formed of organic compounds, of a recycle inert gas stream leaving a solid-state polycondensation reactor of aromatic polyester resins, comprising the steps of: adding oxygen or gas containing oxygen to the gas stream; circulating said gas stream on a catalytic bed containing Pt or mixtures of Pt and Pd supported on an inert porous support at temperatures from 250° to 600° C. in an oxidation reactor having an outlet wherein the quantity of oxygen used is in such an excess that the gas at the outlet of the oxidation reactor contains greater than 10 ppm but less than or equal to 250 ppm of oxygen; drying the gaseous stream leaving the oxidation reactor to remove water from the stream; and recycling the stream to the solid-state polycondensation reactor.

Patent Office, Chennai Branch.

11 Claims

An improved process for the preparation of compounds of the formula

(1),

wherein R¹ represents (C₁-C₆)alkyl group such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, t-butyl and the like, which comprises :

(i) condensing the phenoxazine mesylate of the formula (2)

with compound of formula (3)

where R^3 represents t-butyldimethyl silyl, trimethyl silyl or alkoxyalkyl group; R^2 represents hydrogen or (C_1-C_6) alkyl group, in the presence of a base such as sodium carbonate, potassium carbonate, sodium hydroxide, potassium hydroxide and the like, and a solvent selected from toluene, xylene, THF, DMF, DME, DMSO or alcohols such as methanol, ethanol, propanol, isopropanol and the like, at a temperature in the range of 50 - 150 °C, for a period in the range of 5-30 h, to give compound of the formula (4)

where R^3 represents t-butyldimethyl silyl, trimethyl silyl or alkoxyalkyl group; R^2 represents hydrogen or (C_1-C_6) alkyl group,

(ii) hydrolysing the compound of formula (4) to yield the compound of the formula (5)

in the presence of base such as NaH, NaOH, KOH, t-BuOK, K_2CO_3 , $NaHCO_3$ and the like, or acid such as methane sulfonic acid, HCl, H_2SO_4 , trifluoroacetic acid, para toluene sulfonic acid and the like, and a solvent selected from alcohols such as methanol, ethanol, propanol, isopropanol and the like.

(iii) converting the compound of formula (5) to a compound of formula (6) using alkyl sulfates such as diethyl sulphate, dimethylsulphate and the like, or alkyl halides such as ethyl iodide, methyl iodide and the like, in the presence of a base such as sodium carbonate, potassium carbonate, sodium methoxide, sodium hydride, n-butyl lithium, lithium diisopropyl amine and the like, and a

solvent such as toluene, xylene, benzene, DMF, DMSO, MIBK, ethyl acetate, N-methyl pyrrolidone and the like or mixtures thereof.

wherein R¹ and R² represent (C₁-C₆)alkyl group, followed by hydrolysis to give compound of formula (7)

- (iv) reacting the compound of formula (7) with L-arginine in the presence of a solvent selected from alcohols such as DMF, DMSO, acetone, 1,4-dioxane, alcohols such as aqueous methanol, ethanol, propanol, isopropanol and the like, at a temperature in the range of 10 - 40 °C, for a period in the range of 4-24 h, to yield compound of formula (1) where R¹ is as defined above and
- (v) isolating the compound of formula (1) formed by conventional methods.

Office, Chennai Branch.

16 Claims

1. An improved process for the preparation of compounds of the formula (1),

where R¹ represents (C₁-C₆) alkyl group, which comprises:

- i). esterifying the pure 3-(4-benzyloxyphenyl)-2-hydroxypropanoic acid of
formula (2)

using an alkylating agent such as alcohol, alkylsulfates and the like, in the
presence of base such as potassium carbonate, sodium carbonate, sodium
bicarbonate, potassium bicarbonate, triethyl amine, or organic bases such as
alkoxides and the like, or acid such as sulfuric acid, methane sulfonic acid,
HCl, thionyl chloride, p-TSA and the like, or acidic resin such as amberlite.

amberlist, INDION 130, INDION 140 and the like, and a solvent at a temperature in the range of 30 °C to reflux temperature of the solvent for a period in the range of 2 to 20 h to produce compound of formula (3)

where R represents (C₁-C₆) alkyl group,

ii). debenzylating the compound of formula (3) using metal catalysts in the presence of a solvent such as THF, aqueous acetic acid, ethyl acetate, aqueous or non aqueous (C₁-C₆) alcohols such as methanol, ethanol, propanol, isopropanol and the like.

to yield pure compound of formula (4)

where R represents (C₁-C₆) alkyl,

iii). reacting the compound of the formula (4) with phenoxazinyl mesylate of the formula (5)

in the presence of a base such as sodium carbonate, potassium carbonate, cesium carbonate, potassium bicarbonate and the like, and an organic solvent such as DMF, THF, DME, DMSO, NMP, DEA, toluene, xylene, acetone, MIBK, diethyl ketone, acetonitrile, alcohol such as methanol, ethanol,

propanol, isopropanol and the like, to give compound of the formula (6)

where R represents (C₁-C₆) alkyl group, followed by hydrolysing the compound of formula (6) to a compound of formula (7),

iv). simultaneous etherifying and esterifying the compound of formula (7) using an alkylating agent such as diethyl sulphate, or alkyl halides such as methyl halide, ethyl halide, 2-propyl halide, t-butyl halide and the like, in the presence of a base such as sodium carbonate, potassium carbonate, NaH,

NaOH or KOH, and a solvent selected from alcohol or hydrocarbon, at a temperature in the range of 40 to 130 °C for a period in the range of 5 to 30 h to obtain compound of formula (8)

where R and R' represent (C₁-C₆) alkyl group,

v). hydrolysing the compound of formula (8) to yield compound of the formula (9)

where R' represents (C₁-C₆) alkyl group in the presence of base and solvent,

vi). reacting the compound of formula (9) with L-arginine in the presence of a solvent at a temperature in the range of 10 - 40 °C, for a period in the range of 4-24 h, to yield compound of formula (1) where R' represents (C₁-C₆) alkyl group and

vii). isolating the compound of formula (1) formed by conventional methods.

Patent Office, Chennai Branch.

06 Claims

A novel process for the purification of Hepatitis B Surface Antigen protein (HBsAg) expressed in genetically engineered yeast, wherein the said yeast;

- a) Cells are subjected to lysis wherein the process of lysis is carried out in the absence of any detergent to obtain a cell lysate;
- b) solution of step a is subjected to centrifugation at ranging from 1000 to 10,000 g;
- c) obtaining the solid of step b by decantation, wherein the solid contain the recombinant HBsAg protein;
- e) suspending the said solid in buffer ranging from pH 6 to 7.5 and optionally treating this, with a detergent such as herein described to solubilize the minute impurities;
- c) capturing the said HBsAg protein of step d, with divalent ions like Zn, Cu, Mg in concentration ranging from 0.2% to 3%;
- f) recovering the said HBsAg protein with Tris buffer ranging from 0.1 to 1.5 M, pH ranging from 8 to 8.5;
- g) recovering the said protein through Ultrafiltration, Chromatography on Colloidal silica, and or ion exchange, hydrophobic and or , affinity chromatography.

02CLAIMS

1) A method of making a rubber mould for manufacturing mouldings or castings, comprising the steps of:

(01) building up uncured first and second rubber blocks to predetermined thickness. By bonding together relatively thin and substantially flexible. Uncured rubber plates:

(02) making first and second cavity. In each of the uncured said first and second rubber blocks by cutting out uncured rubber from each of the two rubber blocks such that the shape and size of said first cavity being just sufficient to accommodate part of a first rubber plate and a part of a model located on lower side of part-line of said model, and such that the shape and size of said second cavity being just sufficient to accommodate a part of a second rubber plate and a part of said model located on upper side of said part-line of said model;

(03) bonding spaced registration nuts at selected locations on each of the areas located near the boundaries of opposed surfaces of said first and second rubber blocks;

(04) disposing substantially flexible and relatively thin said first rubber plate on opposed surface of relatively rigid said first rubber block such that said first rubber plate engages simultaneously surface of said first cavity and said first surrounding surface which surrounds said first cavity, where said first surrounding surface is that part of opposed surface of said first rubber block which surrounds said first cavity;

- (05) disposing substantially flexible and relatively thin said second rubber plate on opposed surface of relatively rigid said second rubber block such that said second rubber plate engages simultaneously surface of said second cavity and said second surrounding surface, where said second surrounding surface is that part of opposed surface of said second rubber block which surrounds said second cavity;
- (06) applying a release agent such as mica powder or the like, to the opposed surfaces of rubber blocks and rubber plates;
- (07) disposing said model appropriately to be sandwiched between those parts of opposed surfaces of said first and second rubber plates which are located in said first and second cavities respectively, such that lower surface of said model faces said first rubber plate, and upper surface of said model faces said second rubber plate;
- (08) arranging said first and second rubber blocks near one another to close such that the opposed surfaces of said first and second surrounding surfaces mate and a closed set is formed which comprises said first and second rubber blocks, said first and second rubber plates, and said model;
- (09) disposing said closed set in the empty space of a rigid annular frame;
- (10) disposing said closed set and said rigid annular frame to be sandwiched between opposed metal platens of a vulcanizing machine;
- (11) curing said first and second rubber blocks and said first and second rubber plates by subjecting said closed set and said rigid annular frame to predetermined temperature for a predetermined length of time, in said vulcanizing machine, under pressure, where magnitude of pressure should be such that further compression of the two rubber blocks and the two rubber plates by the opposed platens of vulcanizing machine is not possible;
- (12) removing said closed set and said rigid annular frame, from said vulcanizing machine; and removing and separating said rigid annular frame, said first and second rubber blocks which are vulcanized, said model, and said first and second rubber plates which are vulcanized;
- (13) creating vents and gates in said first and second rubber blocks, and said first and second rubber plates, as required; and applying a release agent such as mica powder or the like, to the opposed surfaces of the two rubber blocks and the two rubber plates;
- (14) disposing appropriately said first and second rubber plates which are vulcanized, in said first and second cavities respectively, and closing said first and second rubber blocks to form a mould set, such that portions of said first and second rubber plates are compressed between said first and second rubber blocks in order to form said rubber mould.

09CLAIMS

1. An alarm cable (1) including at least two electric connector devices (2,3) selected from a number of different types of connector wherein each connector device includes an electric switch SW, which switch forms an electric switching loop (5) which is closed when the connector device is brought together with a female connector and is opened when the connector device is moved from a female connector, at least one alarm signaling device, and at least one electrically conducting wire (4) of the multi-conductor type to form electric connections between the alarm cable connector devices, wherein at least one connector device is connected to the conductors of a wire, whereof two conductors (6) at the first end area of the wire are connected electrically to each side of the respective switching loop of the connector device to form a current loop (7), characterized in that at least one connector device further comprises

A loop detector (8) having a plurality of inputs connected respectively to the respective switching loop of the connector and to two current loop conductors of the connecting wires at the other end area of the wires; which loop detector gives a signal when a change in one or more of the electrical properties of the current loops occurs or when there is a change of state in the aforementioned respective switching loop;

A voltage detector (10), which voltage detector detects the presence of an electric voltage supplied from an external electric power source (9) through one or more connector devices and which gives a signal when there is a loss of voltage;

A control circuit (11) connected to the loop detector (8) and the voltage detector (10), which control circuit gives a control signal of limited duration in response to the presents of a signal from the voltage detector only, which control circuit gives a prolonged control signal in response to the presence of a signal from the loop detector only, or on the concurrent presence of signals from both the loop detector and the voltage detector; and

An alarm signaling device (12) which receives the aforementioned control signals and gives at least one alarm signal in response to the presence of a control signal.

APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003)

PATENT OFFICE KOLKATA.

2 CLAIMS.

1. A process for manufacturing steel plates/strips resistant to acidic corrosion, characterised in that the process comprises the following steps in sequence :-

(a) preparing molten steel of chemical composition (by weight %): C - 0.05 - 0.10, Mn - 0.30 - 0.80, Si - 0.15 - 0.30, S - 0.02 max., P - 0.04 max., Cu - 0.30 - 0.35, Al - 0.025 max., and Fe - the balance, from blast furnace pig iron in a Basic Oxygen/Open Hearth furnace;

(b) tapping the molten steel into a ladle preheated at $1630 \pm 20^{\circ}\text{C}$ containing cathode copper bar, ferro-manganese and ferro-silicon/ⁱⁿrequired quantity;

(c) pouring molten steel into the ingot mould(s) or in the tundish of a continuous casting machine to cast ingots of rectangular cross section, or slabs respectively;

(d) soaking the ingots at $1280 - 1300^{\circ}\text{C}$ for 4 to 6 hours and rolling into slabs in a slabbing mill;

(e) re-soaking the slabs at $1230 \pm 20^{\circ}\text{C}$ for 2.5 to 3 hours, and rolling the slabs into plates in a plate mill or into hot strips in a strip mill;

(f) finish rolling the plates and strips at $875 - 920^{\circ}\text{C}$;

(g) controlled cooling the strips on a run-out table at a cooling rate of 10 to 20°C per second; and

(h) coiling the strips at $640 - 660^{\circ}\text{C}$.

5 CLAIMS.

1. A clutch driven disc assembly comprising:

an inner hub (28) having an axis of rotation (21) and having external teeth (46) defining circumferential gaps (48) therebetween;

an outer hub (38) disposed over the inner hub (28), having internal teeth (52) disposed in the circumferential gaps (48) between the external teeth (46) of the inner hub (28) and the internal teeth (52) of the outer hub (38) being smaller than the circumferential gaps (48) enabling a predetermined amount of relative rotation between the inner hub (28) and the outer hub (38);

an annular spring plate (34) rotatably fixed to the outer hub (38);

an annular disc assembly (24) having a friction element (42) fixed thereto, the disc assembly (24) being mounted for rotation relative to the spring plate (34) by a predetermined amount;

a plurality of drive springs (26) operably disposed between the spring plate (34) and the disc assembly (24);

an annular predamper driving element (60) rotatably fixed to the outer hub (30) and having a planar base portion (68) and having a plurality of axially extending spring retention arms (76) and having a plurality of axially extending spring engagement driving portions (78) disposed radially inwardly of the spring retention arms (76), the spring retention arms (76) defining a plurality of first spring gaps (80) in radial alignment with the spring retention arms (76);

an annular predamper driven element (62) rotatably fixed to the inner hub (28) and having an annular shoulder (82,88) and having a plurality of axially extending spring engagement driven portions (90) defining a plurality of second spring gaps (94) in radial alignment with the first spring gaps (80) in a neutral condition; and

a plurality of predamper springs (64) disposed in the first and second spring gaps (80,94), wherein the predamper springs (64) are compressed with relative rotation between the predamper driving element (60) and the predamper driven element (62).
